Fundamentals of Telecommunications Overview Sometimes, when attending a class, it is okay to miss the first half-hour. After all, we do know something about the subject, and that first half-hour is likely to carry little more than introductory information. The same holds true when picking up a textbook on a particular subject.

Fundamentals of Telecommunications

The purpose of any telecommunications system is to transfer information, from the sender to the receiver by a means of a communication channel. The information is carried by a signal, which is certain physical quantity that changes with time. The signal can be a voltage proportional to the amplitude of the voice, like in a simple telephone, a sequence of pulses of light in an optical fibre, or a radio-electric wave irradiated by an antenna.
