**Bird Adaptations Beaks and Feet—Tale of Chipilo**  
The feathers on this raptor (bird of prey) extend much farther down the legs than the feathers of most birds. Some birds, like the Snowy Owl, also have feathers that cover their feet. The feathers help keep the birds' feet warm in extremely cold weather. Most birds use their beaks for preening (grooming), but many also use their feet. Birds developed the habit of using their beaks and feet for preening because their "hands" have evolved into wings.
