6.263J / 16.37J focuses on the fundamentals of data communication networks. One goal is to give some insight into the rationale of why networks are structured the way they are today and to

understand the issues facing the designers of next-generation data networks. Much of the course focuses on network algorithms and their performance.

Data Communication Networks

| Electrical Engineering and

Prakash C Gupta ...

Data communication refers to the exchange of data between a source and a receiver via form of transmission media such as a wire cable. Data communication is said to be

local if communicating devices are in the same building or a similarly restricted geographical area. The meanings of source and receiver are very simple.

What is Data Communication? - Computer Notes

Data communications refers to the transmission of this digital data between two or more computers and a computer network or data network is a

telecommunications network that allows computers to exchange data. The physical connection between networked computing devices is established using either cable media or wireless media.

Computer network - Wikipedia
Computer network is a
telecommunication channel
using which we can share
data with other coomputers
or devices, connected to the

same network. It is also called Data Network. The best example of computer network is Internet. Computer network does not mean a system with one Control Unit connected to multiple other systems as

its slave.
