[Includes 59 photos/illustrations and 30 maps] The hedgerow country of northwestern France-the Bocage presented a trying challenge to the U.S. Army in 1944. During the Normandy invasion, U.S. forces faced a stubborn German Army defending from an extensive network of small fields surrounded by living banks of hedges bordered by sunken dirt lanes. German forces fighting from these ready-made defensive positions were, at first, able to curb most of the American advances and make the attempts very costly. For the U.S. Army, busting through the difficult Bocage country required tactical, doctrinal, and organizational ingenuity. Busting the Bocage: American Combined Arms Operations in France, 6 June-31 July 1944 shows how the U.S. Army identified and overcame the problems of fighting in difficult terrain. The adoption of new tactics combined with technical innovations and good small-unit leadership enabled American forces to defeat a well-prepared and skillful enemy. In the hedgerow country, the U.S. Army eventually brought the separate components of the combined arms team-infantry, armor, and artillery-to bear on the enemy simultaneously. The resulting successes were costly but effective. Combat in the Bocage demonstrated the U.S. Army ' s capability to fight and win in a new and hostile environment.

CMH Publication 70-30. Edited by Frank N. Schubert and TheresaL. Kraus. Discusses the United States Army's role in the Persian Gulf War from August 1990 to February 1991. Shows the various strands that came together to produce the army of the 1990s and how that army in turn performed under fire and in the glare of world attention. Retains a sense of immediacy in its approach. Contains maps which were carefully researched and compiled as original documents in their own right. Includes an index.

The Institute of Medicine carried out a study mandated by Congress and sponsored by the Department of Veterans Affairs to provide an assessment of several issues related to noise-induced hearing loss and tinnitus associated with service in the Armed Forces since World War II. The resulting book, Noise and Military Service: Implications for Hearing Loss and Tinnitus, presents findings on the presence of hazardous noise in military settings, levels of noise exposure necessary to cause hearing loss or tinnitus, risk factors for noise-induced hearing loss and tinnitus, the timing of the effects of noise exposure on hearing, and the adequacy of military hearing conservation programs and audiometric testing. The book stresses the importance of conducting hearing tests (audiograms) at the beginning and end of military service for all military personnel and recommends several steps aimed at improving the military services' s prevention of and surveillance for hearing loss and tinnitus. The book also identifies research needs, emphasizing topics specifically related to military service.
