Children are already learning at birth, and they develop and learn at a rapid pace in their early years. This provides a critical foundation for lifelong progress, and the adults who provide for the care and the education of young children bear a great responsibility for their health, development, and learning. Despite the fact that they share the same objective - to nurture young children and secure their future success - the various practitioners who contribute to the care and the education of children from birth through age 8 are not acknowledged as a workforce unified by the common knowledge and competencies needed to do their jobs well.

Transforming the Workforce for Children Birth Through Age 8 explores the science of child development, particularly looking at implications for the professionals who work with children. This report examines the current capacities and practices of the workforce, the settings in which they work, the policies and infrastructure that set qualifications and provide professional learning, and the government agencies and other funders who support and oversee these systems. This book then makes recommendations to improve the quality of professional practice and the practice environment for care and education professionals. These detailed recommendations create a blueprint for action that builds on a unifying foundation of child development and early learning, shared knowledge and competencies for care and education professionals, and principles for effective professional learning. Young children thrive and learn best when they have secure, positive relationships with adults who are knowledgeable about how to support their development and learning and are responsive to their individual progress. Transforming the Workforce for Children Birth Through Age 8 offers guidance on system changes to improve the quality of professional practice, specific actions to improve professional learning systems and workforce development, and research to continue to build the knowledge base in ways that will directly advance and inform future actions. The recommendations of this book provide an opportunity to improve the quality of the care and the education that children receive, and ultimately improve outcomes for children.

"Tabbner's Nursing Care: Theory and Practice is the only Australian and New Zealand textbook written specifically for the enrolled nurse student. The new 5th edition of this best-selling text has been fully revised and updated throughout to reflect the content of the new National Curriculum. Unit 1 The evolution of nursing Unit 2 The health care environment Unit 3 Cultural diversity and nursing practice Unit 4 Promoting psychosocial health in nursing practice Unit 5 Nursing individuals throughout the lifespan Unit 6 The nursing process Unit 7 Assessing health Unit 8 Important component of nursing care Unit 9 Health promotion and nursing care of the individual Appendices."--Provided by publisher.

Physical inactivity is a key determinant of health across the lifespan. A lack of activity increases the risk of heart disease, colon and breast cancer, diabetes mellitus, hypertension, osteoporosis, anxiety and depression and others diseases. Emerging literature has suggested that in terms of mortality, the global population health burden of physical inactivity approaches that of cigarette smoking. The prevalence and substantial disease risk associated with physical inactivity has been described as a pandemic. The prevalence, health impact, and evidence of changeability all have resulted in calls for action to increase physical activity across the lifespan. In response to the need to find ways to make physical activity a health priority for youth, the Institute of Medicine's Committee on Physical Activity and Physical Education in the School Environment was formed. Its purpose was to review the current status of physical activity and physical education in the school environment, including before, during, and after school, and examine the influences of physical activity and physical education on the short and long term physical, cognitive and brain, and psychosocial health and development of children and adolescents. Educating the Student Body makes recommendations about approaches for strengthening and improving programs and policies for physical activity and physical education in the school environment. This report lays out a set of guiding principles to guide its work on these tasks. These included: recognizing the benefits of instilling life-long physical activity habits in children; the value of using systems thinking in improving physical activity and physical education in the school environment; the recognition of current disparities in opportunities and the need to achieve equity in physical activity and physical education; the importance of considering all types of school environments; the need to take into consideration the diversity of students as recommendations are developed. This report will be of interest to local and national policymakers, school officials, teachers, and the education community, researchers, professional organizations, and parents interested in physical activity, physical education, and health for school-aged children and adolescents.

With growing concerns over declining levels of school readiness and physical activity, this book highlights the importance of quality early movement experiences and explores the connection between poor early Physical Development opportunities and later difficulties in the classroom. The book outlines the Physical Development needs of babies, toddlers and young children up to the age of eight, and suggests practical ways in which these can be provided for. It explores key concepts and terms, such as physical literacy, fundamental movement skills, sport, physical activity and Physical Education (PE), in relation to young children's Physical Development needs and discusses age-appropriate provision. Advice is given to prevent movement difficulties from occurring, but it is acknowledged that not all children follow a typical Physical Development pathway, and, where this is the case, suggestions are provided to help put children "back on course." The Physical Development Needs of Young Children is important reading for all who work with or care for young children, including Early Years practitioners, primary school teachers, students who are studying to join these professions, and parents.

Provides a comprehensive study of human development from conception to adulthood. It explores the foundations of modern development thought, through the work of researchers such as Freud and Erikson, and also incorporates the latest international research. Slee at Flinders, Campbell at QUT, Spears at Uni of South Australia.

Gold winner at the Practical Pre-School Awards 2015... Physical development underpins much of a child's later educational advancement. Without good coordination, core stability and gross motor skills the fine motor skills needed for tool handling and writing may not fully develop. Each aspect of physical development is interlinked with a child's future success as a learner. This book contains practical, easy to follow suggestions linked to the ages and stages of the Early Years Outcomes. It offers clear information on what to look for in terms of the child's developing moving and handling skills and how to plan for next steps. Each section is colour coded and links the Early Years Outcomes to the planning cycle and Characteristics of Effective Learning. It contains a wide range of additional activities and an assessment grid to support practitioners' current tracking systems and help demonstrate progress over a specific period of time.

This exciting chronological introduction to child development employs the lauded active learning approach of Laura E. Levine and Joyce Munsch's successful topical text, inviting students to forge a personal connection to the latest topics shaping the field, including neuroscience, diversity, culture, play, and media. Using innovative pedagogy, Child Development From Infancy to Adolescence: An Active Learning Approach reveals a wide range of real-world applications for research and theory, creating an engaging learning experience that equips students with tools they can use long after the class ends.

This topically-organized text provides a comprehensive overview of infant development with a strong theoretical and research base. Readers gain a clear understanding of infant development and issues that will be the focus of significant advances in infancy studies in the future. The new fifth edition reflects the enormous changes in the field that have occurred over the past decade. The thoroughly revised chapters emphasize work from the 21st century, although classic references are retained, and explore contextual, methodological, neurological, physical, perceptual, cognitive, communicative, emotional, and social facets of infant development. The fifth edition features a more accessible style and enhanced pedagogical and teaching resource program. This extensively revised edition features a number of changes: • The fifth edition adds a new co-author, Martha Arterberry, who brings additional teaching and research skills to the existing author team. • An enhanced pedagogical program features orienting questions at the beginning of each chapter and boldfaced key terms listed at the end of the chapter and defined in the glossary to help facilitate understanding and learning. • Two new boxes in each chapter – Science in Translation illustrate applied issues and Set for Life highlight the significance of infancy for later development. • Increased emphasis on practical applications and social policy. • More graphs, tables, and photos that explain important concepts and findings. • Literature reviews are thoroughly updated and reflect contemporary research. • All new teaching web resources -- Instructors will find Power Points, electronic versions of the text figures, and a test bank, and students will find hyperlinked references and electronic versions of the key concepts and the definitions. Intended for beginning graduate or advanced undergraduate courses on infant (and toddler) development or infancy or early child development taught in departments of psychology, human development & family studies, education, nursing, social work, and anthropology, this book also appeals to social service providers, policy makers, and clergy who work with community institutions. Prerequisites include introductory courses on child development and general psychology.

"This accessible text--now revised and updated--has given thousands of future educators a solid grounding in developmental science to inform their work in schools. The expert authors review major theories of development and their impact on educational practice. Chapters examine how teaching and learning intersect with specific domains of child and adolescent development--language, intelligence and intellectual diversity, motivation, family and peer relationships, gender roles, and mental health. Pedagogical features include chapter summaries, definitions of key terms, and boxes addressing topics of special interest to educators. Instructors requesting a desk copy receive a supplemental test bank with objective test items and essay questions for each chapter. (First edition authors: Michael Pressley and Christine B. McCormick.) Key Words/Subject Areas: teachers, education, developmental psychology, child development, childhood development, adolescent development, schoolchildren, adolescents, students, educational psychology, developmental theories, teaching methods, learning, biological development, cognitive development, social development, emotional development, language development, intelligence, academic motivation, family relationships, peer relationships, mental health problems, gender roles, social-emotional learning, texts, textbooks Audience: Instructors and graduate students in education, child and family studies, and school psychology"--
